Hi Alicia,

Thank you for your message.

I apologize for the misunderstanding. We have two separate pipelines, one for county and one for jurisdictional aggregate data. Unfortunately, we classify COVID-19 by their confirmed and probable case definitions at the jurisdictional level. Would it be possible to complete the attached template at the jurisdictional level? Our Aggregate Data Team will take a look at the file when it is submitted and we will attempt to incorporate early next week.

Thanks,

Sarah Witter (Ctr), *on behalf of*

Subject: Re: CO - Colorado county data follow-up

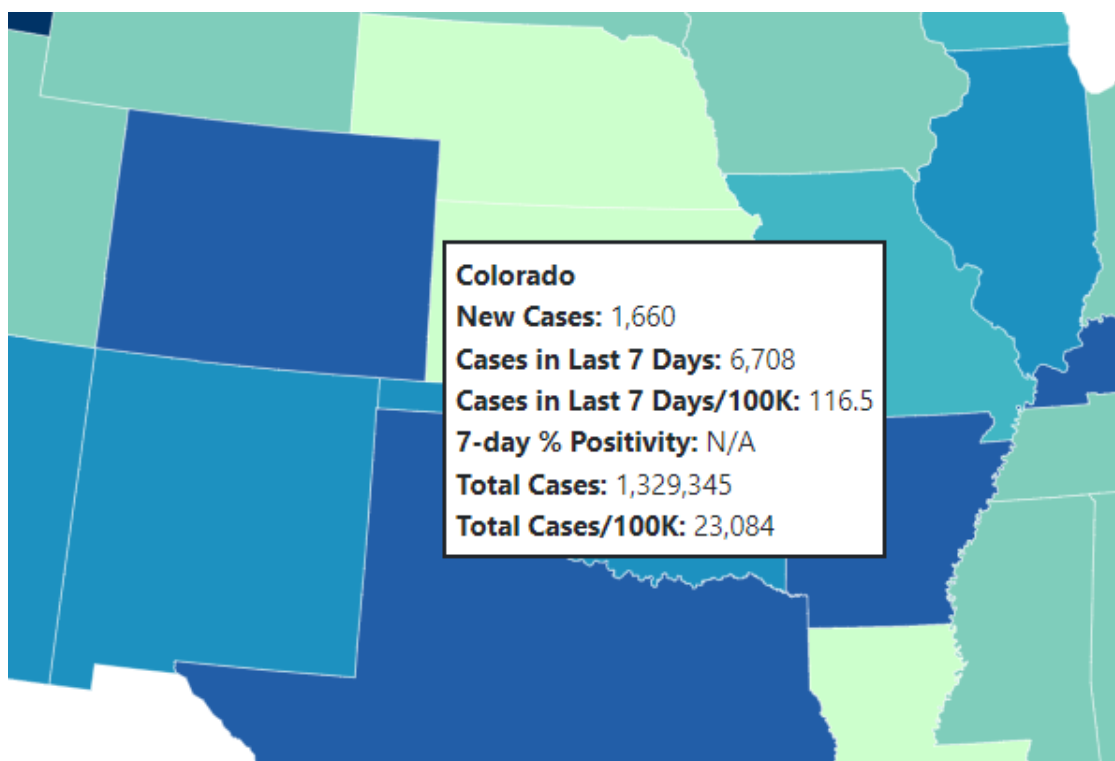

Good morning CDC partners!

Thank you for updating our county level data. We see the changes reflected on the county level maps for community levels and county transmission levels. This is huge and will help a lot.

We do not see the changes reflected in our state incidence data as shown on here: https://covid.cdc.gov/covid-data-tracker/#cases_casesper100klast7days

So we now have a disconnect between our county and state data. We thought this would fix that area as well. How can we resolve this, please? Can this be resolved today?

Thanks
Alicia

Subject: Re: CO - Colorado county data follow-up

Thank you for the information and updated template. Just a heads up that in the template when the 'date' column reaches 2022-02-24 the date in the following row is 2020-12-11 and starts going up again from there until the date in the last row in the template says 2021-12-31.

Good Afternoon Eduardo,

Thanks for reaching out!

Unallocated is used as a place to store cases that are listed on the county source that do not have an associated FIPS code in our system. So, yes, the interational county cases section is most likely attributed to Unallocated along with anything else on the CO county dashboard that isnt aligned to an actual county with FIPS. We also often use this field to place cases as a temporary hold when there are large discrepancies in county counts compared to the jurisdictional cases/deaths counts. The reason for this is that data adjustments/backlogs will usually present themselves on the jurisdictional side before arriving in the county data. For some added context, after todays run for unallocated CO, we eneded up with 124 cases and 0 deaths, and those numbers have persisted since 3/11 in our data. The unallocated counties do not get displayed in any of our products just as an additonal fyi (covid data tracker and CCL).

As for the file, no problems from our end if you want to start it at 3/1/2020! We can prefill in the 0s. For integration this evening/early morning tomorrow we will accept the data up to the 16th.

One more thing to note, the first file we shared with you all appeared to have removed the leading 0s in the FIPS codes. We have corrected that here in the file attached.

Hope this helps and let us know if you have any further questions! Thanks!

Best,

Subject: Re: CO - Colorado county data follow-up

Good morning Aggregate Data Team,

As we compile these data, we have 2 more questions.

- For Unallocated Colorado, are you using this value for our International County cases?
- Our cases begin on 3/1/2020 and currently end on 3/16/2022. Can we modify the template to include start later than 1/22/2020 and end later than 3/13/2022?

Thank you,

Eduardo Gabrieloff

Good afternoon,

Thank you for your question and i'm sorry for the delay in my response. We currently scrape the "Deaths Among Cases" field for the county level data. So using this field would align well with what we currently display.

Thanks,

Sarah Witter (Ctr), *on behalf of*

Good morning,

For the COVID-19 Deaths on this list, are you interested in Deaths Due To COVID-19 or Deaths Among Cases?

Thank you,

Good afternoon,

Thanks again for joining the call earlier today and for taking the time to explain your concerns with Colorado's county data. We have attached a template which is used to capture cumulative counts by county throughout the timeseries.

The 'confirmed' column should include cumulative COVID-19 case counts and the 'deaths' column should include cumulative COVID-19 death counts.

If you could send the data to the following places, that would be very helpful:

- Box folder: Colorad.ano2j52kvaou5y37@u.box.com
- JHU APL Team Inbox: cdc-acdc-ops@jhuapl.edu
- CDC State Coordination Inbox: eocevent118@cdc.gov

As you are working through the backlog, we ask that the data are emailed no later than 8am ET each Thursday. This will ensure the most accurate counts for both the community transmission level on COVID Data Tracker and the new COVID-19 Community Level Indicator. Please let us know if you have any other questions as you attempt to fill out this template.

Thanks,

Sarah Witter (Ctr), *on behalf of*
